

Test Documentation Task: Identify Challenging Endpoint

1 Objective

The objective of this task is to create test documentation and test cases for the endpoint of the provided Postman collection. The testing should cover various scenarios including positive, negative, boundary, and security testing.

2 Postman Collection

Name: Public REST APIs Collection

Checkout Link: [Access the Collection](#)

Click on the "Access the Collection" link to open the Postman collection.

3 Requirements

The requirements for this task are as follows:

1. Review the provided Postman collection.
2. Identify the '/IP Address' and 'CryptoCurrency' endpoint and its functionalities.
3. Create comprehensive test documentation covering the following testing scenarios:
 - Positive Testing: Ensure the endpoint returns valid user data.
 - Negative Testing: Test error responses for invalid requests.
 - Boundary Testing: Test limits of the API parameters.
 - Security Testing: Verify security mechanisms and data protection.
4. Create test cases for each scenario mentioned above, detailing:
 - Sample requests with necessary parameters.
 - Expected responses and status codes.
 - Assertions to be made on the response data.
 - Precondition(s) required for executing the test cases.

4 Documents to Prepare

4.1 Document 1

Please prepare a document that outlines standard test case scenarios. This should include details such as the test case description, input data, and the expected outcome. The format should be similar to the table in the image provided, which includes columns for “Test Case”, “Description”, “Input Data”, and “Expected Outcome”.

Example: [Click here to access the Collection](#)

4.2 Document 2

Create a document that serves as a guide to our API, similar to a Postman collection documentation. This document should explain the various components of an API request and response in a simple and understandable manner. Please include details about the request body, response body, headers, and methods like GET, POST, PUT. Also, provide information about the API endpoints.

Example: [Click here to access the Collection](#)

5 Submission

Once completed, submit the test documentation and test cases in a document format (PDF preferred) along with any supporting files.
