

Device Specifications

Android Version: 9-Pie

Brand: OPPO

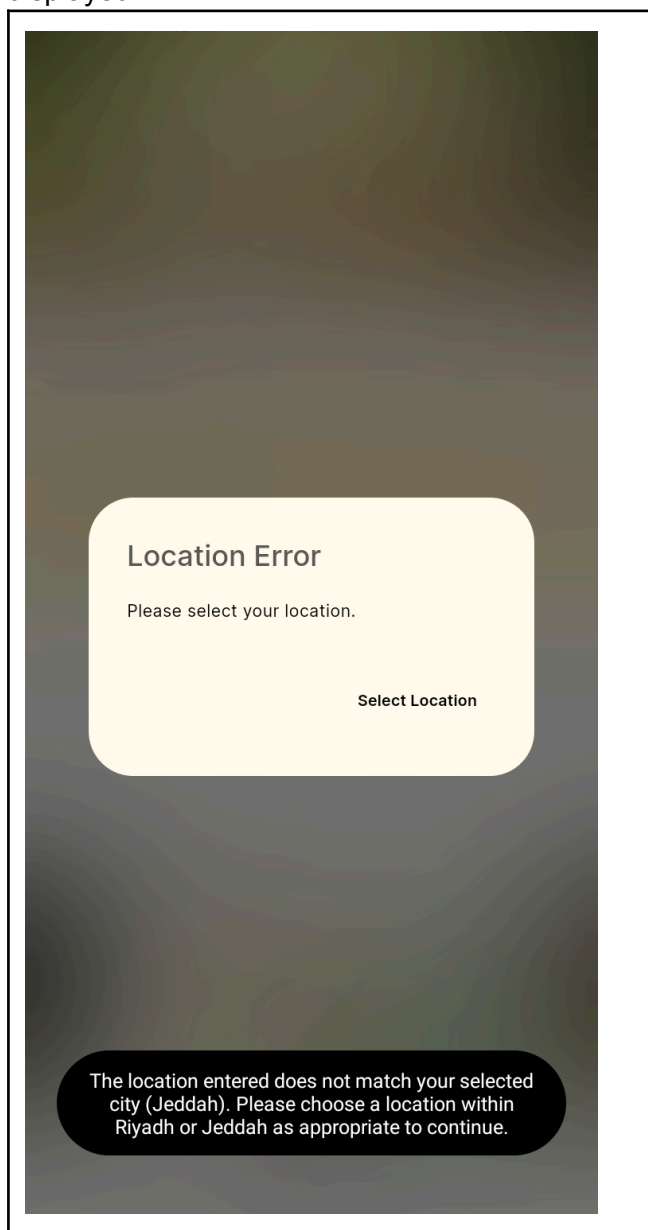

Model: A1K

1- Design Issues

Location Screen: The status bar items are not visible.

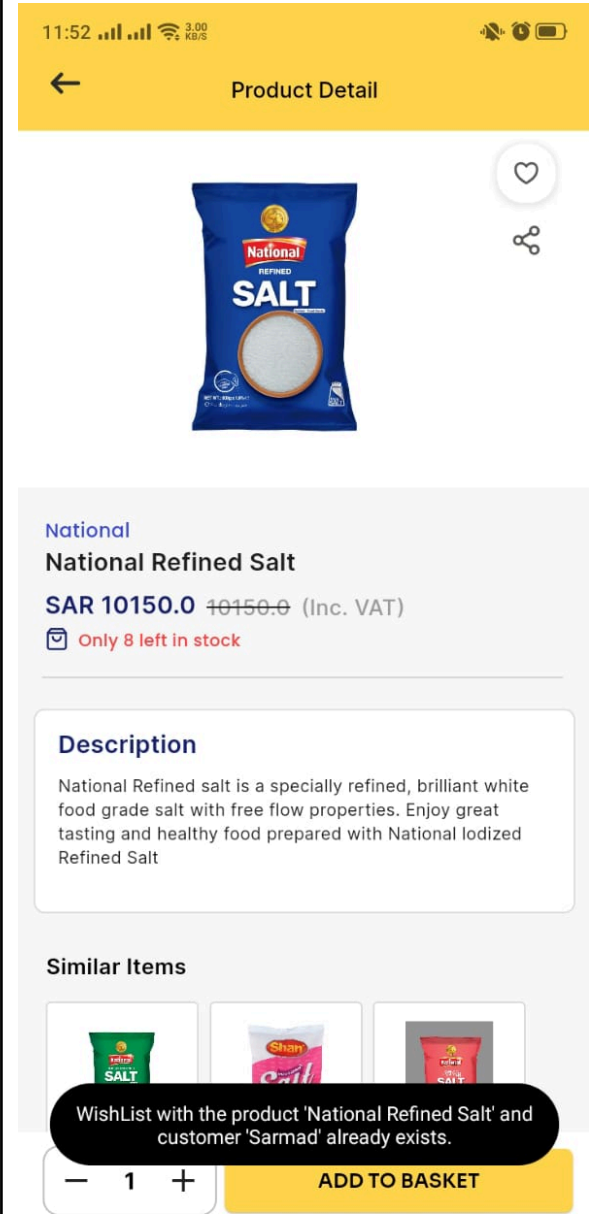

Location Popup: The popup should not be dismissible until user selects the correct location and message should be more appropriate like: "you can't shop in this location kindly update your location to your seletece city i.e. Jeddah (If jeddah selected or then riyadh).

If I press back after updating the location from home screen then the location screen is being displayed.

Home Screen: The scroll of category items is too much laggy.

Product Detail Screen: The add to WishList button is not working properly, if a product is added to wishlist from subcategory screen then the filled icon should appear in detail screen, if I try to add that again in detail screen (that is already added from the subcategory screen) getting already added error although by tapping again it should remove the item from wishlist.

Physical Device	Figma Design
	

Sub Category Screen: If I add a product from a subcategory and navigate to another subcategory the same layout of the added product appears from the last subcategory appears on it (Not fixed in vFinal) and for every category only Salt & Sugar subcategories are being displayed.

Physical Device (Added product)	Physical Device

2- Functionality Issues

→ Registration Screen

- ◆ In email text, trim it before sending it to API, getting invalid email if email has any whitespace.

→ Home Screen

- ◆ The newly added category is not being displayed in home screen (Spice & Spice Mix is newly added category)

→ Category -> SubCategory

- ◆ For every category only salt & sugar category is being displayed, maybe a hardcoded category id is being referenced.
- ◆ Filter & Sort Buttons not working

→ Product Detail Screen

- ◆ If a product is added to the wishlist the icon is being changed, if I go back and revisit the same product the icon is changed back to unfilled.
- ◆ If I add a product from similar items the add to basket button of the selected product changes to view in the basket although that product is not in the cart.
- ◆ If user visit already added product then there should be button of view in basket and quantity should only be updated from the cart.

→ My Cart

- ◆ If the Delivery Time is not selected I'm able to place the order (By default the first item is selected when order is placed).

→ Checkout

- ◆ If I add a new address and then I tap the continue button with or without selecting the address nothing happens.
- ◆ If I press back after adding the location then the location screen appears.

→ My Orders

- ◆ If user is not logged in then a blank screen with a login button appears, there should be text stating that "Please login to view your orders, etc".
- ◆ By Tapping the Cancel button multiple times it sends hit to the API multiple times if should be disabled until the response of the first hit is received.
- ◆ Cancel Order Status not working, canceled order still in progress in My orders (In order detail it is working fine). After the order is canceled the list should be refreshed

→ Forgot Password

- ◆ Not able to change password getting account not exists.

→ Login

- ◆ No back navigation is available to the Home Screen.
